

Venuely

Event Venue Booking & Management Mobile Application

Student Information

Student Name : Taiyeaba Shams

Student ID : 232-134-012

Subject : Mobile App Development

Program & Batch : SWE — 5th Batch

PROJECT TITLE

Venuely – Event Venue Booking & Management App (Built with Flutter & Dart)

1. PROJECT DESCRIPTION

Venuely is a modern, high-performance Flutter mobile application designed to simplify the event planning process by enabling users to discover, filter, inspect, and book venues for various occasions. Whether users are organizing grand weddings, corporate conferences, birthday bashes, or outdoor retreats, Venuely provides a centralized digital catalog packed with rich imagery, guest capacity data, transparent pricing, and amenity overviews.

As a frontend-focused academic application, Venuely emphasizes exceptional UI/UX design, fluid page transitions, glassmorphic UI card elements, and clean state management. The app utilizes **Provider** to manage search query states, favorite bookmarks, and booking sessions dynamically. Data persistence (such as saved bookmarks, confirmed booking history, and dark/light theme preferences) is handled locally using **SharedPreferences**.

2. PROBLEM STATEMENT

The Challenge: Finding an appropriate venue for an event is often a tedious and fragmented task. Users typically have to navigate multiple websites, social media pages, or make phone calls to compare venue locations, pricing, capacity, and available dates.

The Solution: Venuely eliminates these friction points by providing an intuitive, single-stop mobile interface where users can filter venues according to budget and event type, review

complete venue details, check date/time slot availability, and submit booking requests with instant visual feedback.

3. TARGET USERS

- **Wedding Couples & Planners:** Searching for banquet halls, luxury resorts, and garden venues.
- **Party Hosts:** Organizing birthday parties, anniversaries, or private family gatherings.
- **Corporate Event Managers:** Booking professional conference rooms, seminar halls, and meetups.
- **Student Committees:** Arranging university club events, galas, and batch reunions.

4. LIST OF CORE FEATURES

Home & Discovery Dashboard

Featured venue carousels, event category chips (Weddings, Corporate, Birthdays, Parties, Outdoor), recommended listings, and quick search bar.

Advanced Search & Filtering

Real-time search by venue name or location. Multi-criteria filtering by price range slider, event category, rating, and guest capacity.

Interactive Venue Cards & Catalog

High-resolution images, location badges, starting price indicators, star rating badges, and one-tap favorite (bookmark) button.

Comprehensive Venue Details Screen

Multi-image gallery slider, detailed description, capacity stats, facility pills (WiFi, AC, Catering, Parking), and available date/time slot picker.

Booking System & Form Validation

Date & time slot selection, guest count input, event type selector, and contact information form with strict regex validation.

♥ Favorites, History & Theme Toggle

Dedicated tab for saved favorite venues, active booking history cards, and seamless Light/Dark theme switching persistent via SharedPreferences.

5. TECHNICAL ARCHITECTURE & COURSE CONCEPTS

Semester Concept	Implementation in Venuely
State Management (Provider)	Manages active search filters, favorite bookmarks state, booking list, and global theme state reactively across all screens.
Local Storage (SharedPreferences)	Persists user theme preferences (Light/Dark mode), saved venue IDs, and offline booking history locally.
Navigation & Routing	Clean Stack navigation between Home, Search, Venue Details, Booking Modal, Confirmation Screen, and Bottom Navigation bar.
Forms & Validation	Implements Flutter Form and TextFormField validation for contact details, guest count range checks, and date selections.
Custom Widgets & Design	Modular custom widgets including VenueCard, CategoryChip, FacilityBadge, and GlassmorphicCard.
